Lost On Lombard is a GBC inspired - and decorated - by the Lego 21043 San Francisco Architecture set.

My aim with this GBC was to create a low-friction stepper-style mechanism which would pass the balls back-and-forth up a series of steps.

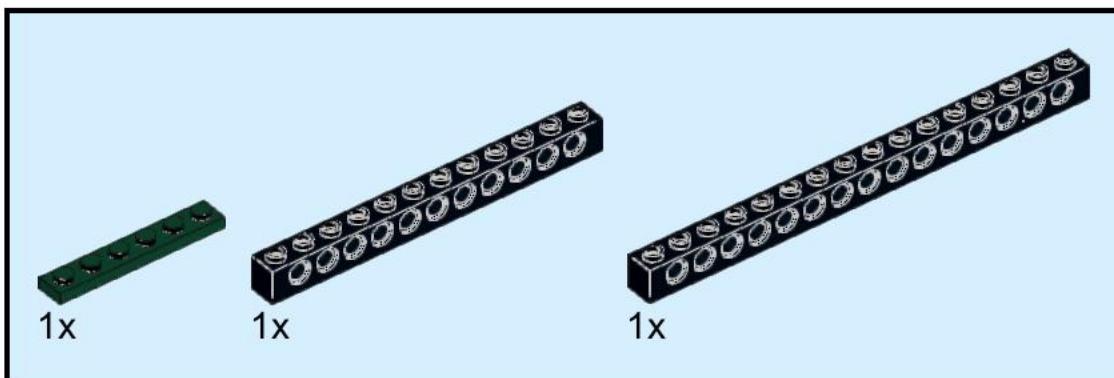

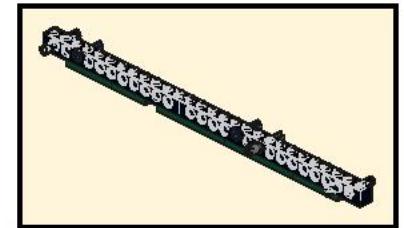

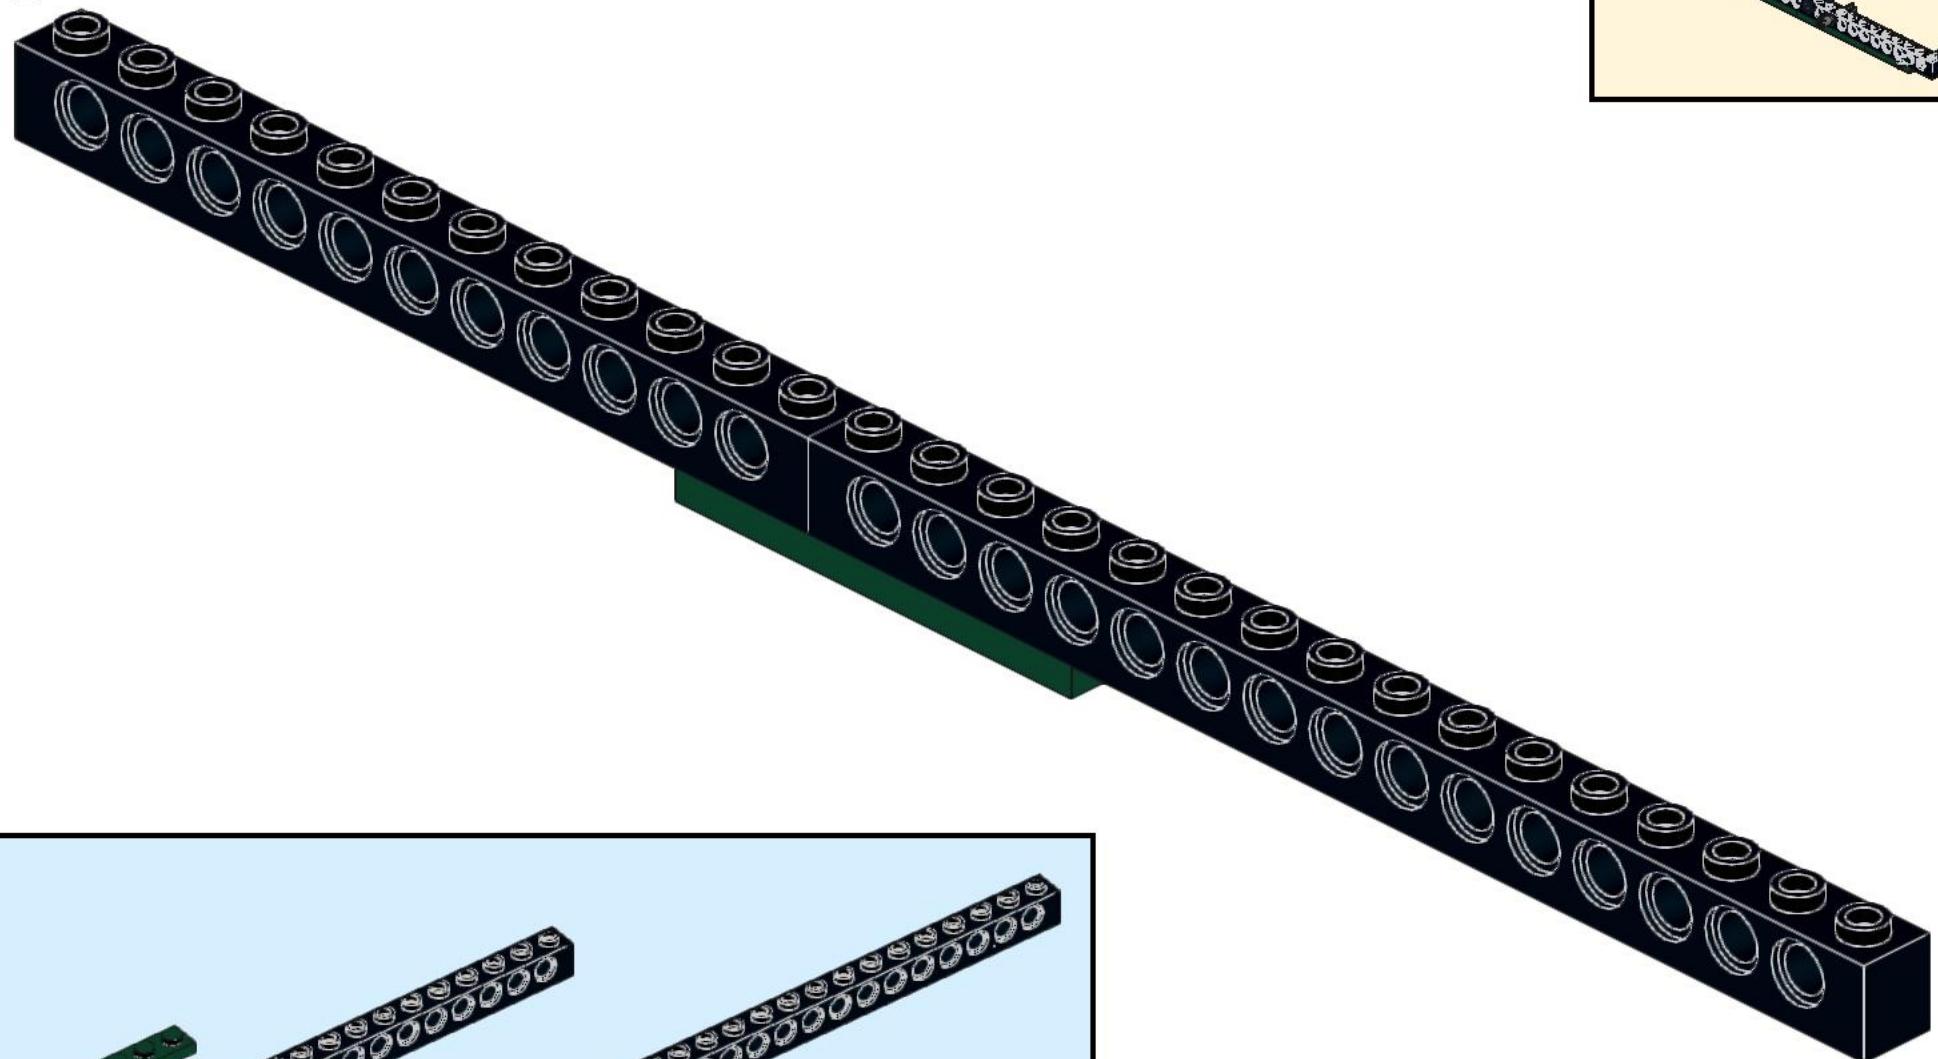

The movement of the balls mimics the path of cars as they travel back-and-forth on the famous Lombard Street (pictured right) in San Francisco.

"Lost" on Lombard reflects the reality that traffic on Lombard Street travels downhill, while our balls are moving uphill and are, therefore ... lost.

A cost-effective way to obtain most of the decorative parts is to purchase the Architecture set. If you already have this set, and it is built, be aware that you'll need to disassemble most of it. Though visually similar, significant changes were made creating the front decorative facade for this module.

Removal of the orange pins, and the grey axle allow the motor to be quickly removed.
