MOD04 Ver. 1.0

The Avengers Tower GBC marries a minimally-modified 76038 Attack on Avengers Tower set from 2015, with the Brickworld 2018 Ball Pump.

The tower structure has been "hollowed out" to allow for the ball pump tube to rise through the front half of the set, while the rear hinged-section of the set has been reversed to swing open from the opposite side, to be viewable when open, from the front of a GBC display.

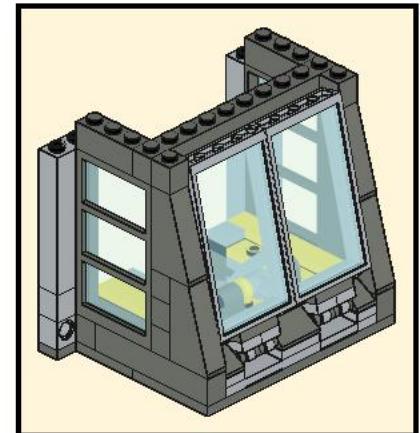

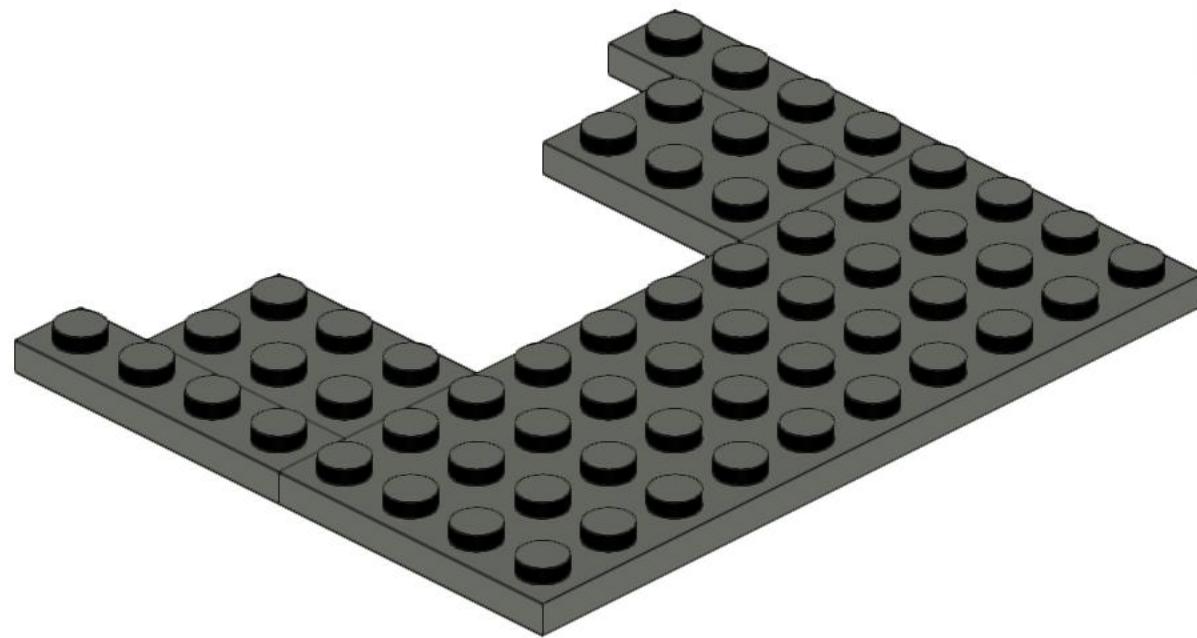

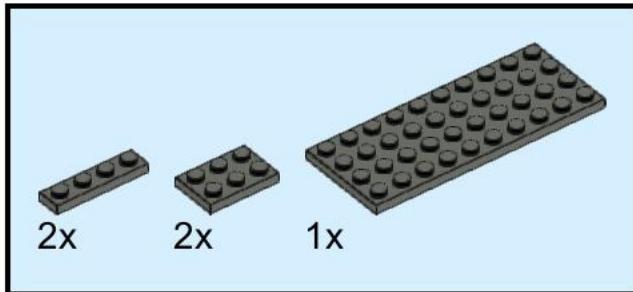

The ball pump input has been lengthened slightly to provide more space for ball entry when the tower sections are closed.

Bracing for the pistons has been moved from the sides of the module to the front and back, to "slim" the standard module to the proportions of the tower. A front facade is held in place by two pins to hide the bracing.

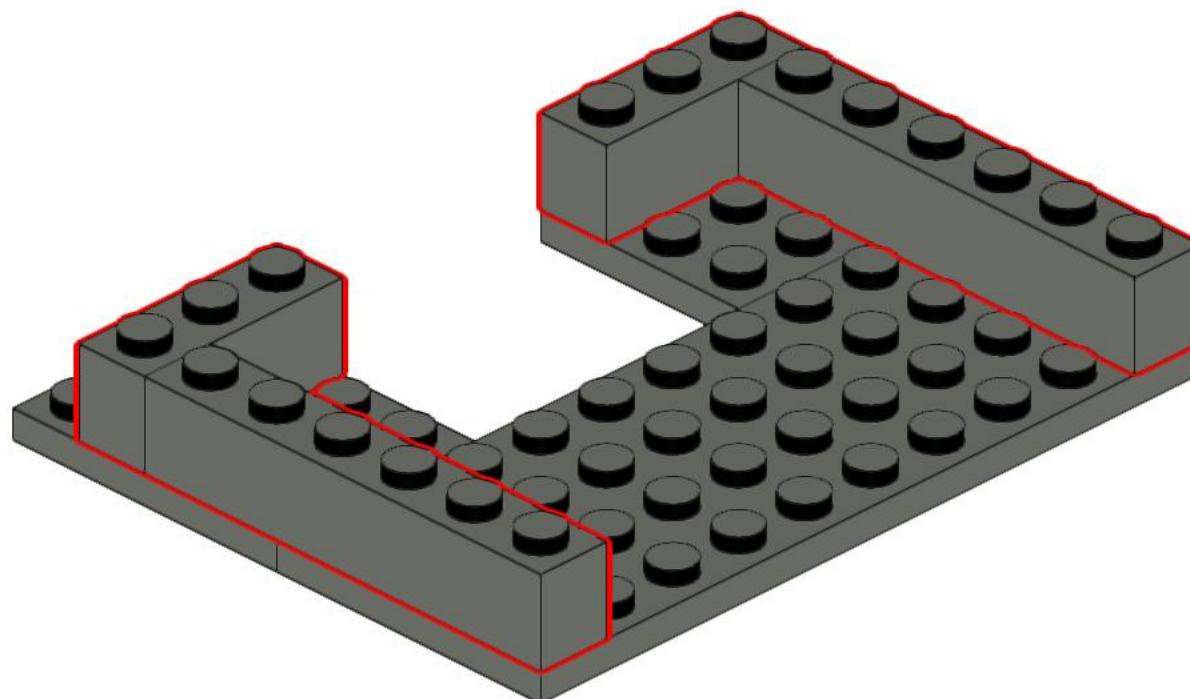

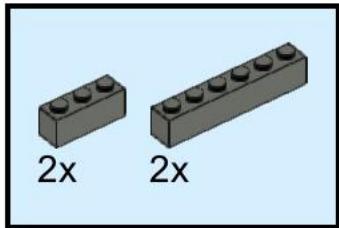

A "gasket" is placed between the pump and the tower. The tower, front facade and gasket are all easily removed for maintenance. Custom window decals were created with BrickLink's new Part Designer.
