LEGO Powered Up Handset (28739)

<http://eucalypt.com/lego/oth02.html>

The BatDozer is a modified chassis beneath the
Lego-designed App-Controlled Batmobile, Set 76112.

The chassis re-design provides a geared-down,
all-wheel-drive configuration, slowing the Batmobile to a
speed more suitable for use in a GBC Dozer Pit.

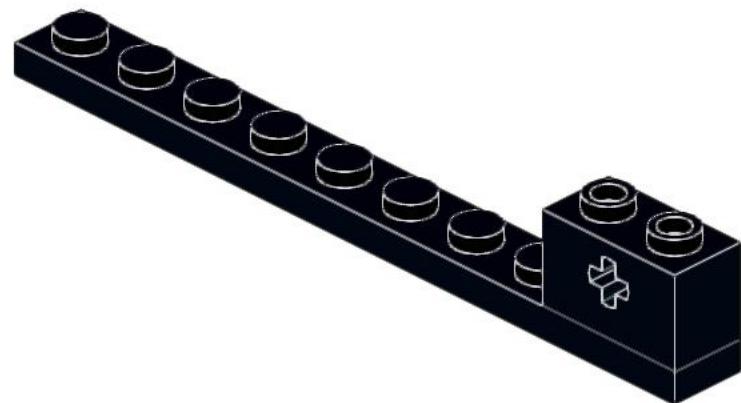

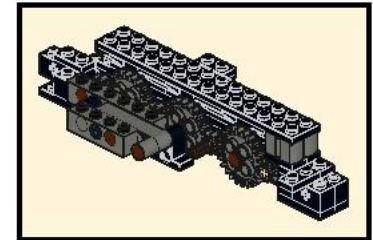

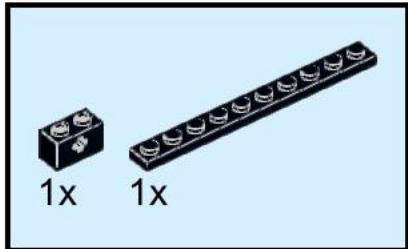

The new chassis is also used to mount protective bars
around the wheels - to keep them from climbing walls - as
well as anchoring the front ball-pusher bar.

Driving the BatDozer with the Powered Up Train Controller
and modified stick controllers, provides a traditional
Remote-controlled car experience.

This assembly can be difficult to install. It may be easier to loosen the rear, move it into place and then put everything together. These connectors keep the rear axles in place.
