

TOWER BRIDGE

At its core, this GBC is a modified Brickworld 2018 Ball Pump, which drives the balls up the left tower, to the front transfer beam, where gravity takes them across and down the right tower.

The Tower Bridge GBC uses the official Lego set 10214 as the basis of its decorative construction.

Several changes have been made to accommodate this GBC transformation. The entry and exit roadways slope. Minor changes to the tower window frames accommodate the internal ball tunnels. The top cross-beams have been enlarged to allow balls to pass through. The base plates have been swapped and the entire bridge has been raised onto rocky platforms to a GBC-compliant height.

It is serendipitous that the inside dimension of these towers almost perfectly fit a BW2018 Ball Pump, requiring only small changes. The base of the left tower is hollow, allowing the entire rock base and tower to be lifted off the ball pump if there is a malfunction that needs to be addressed.

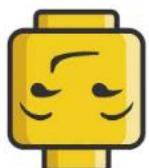

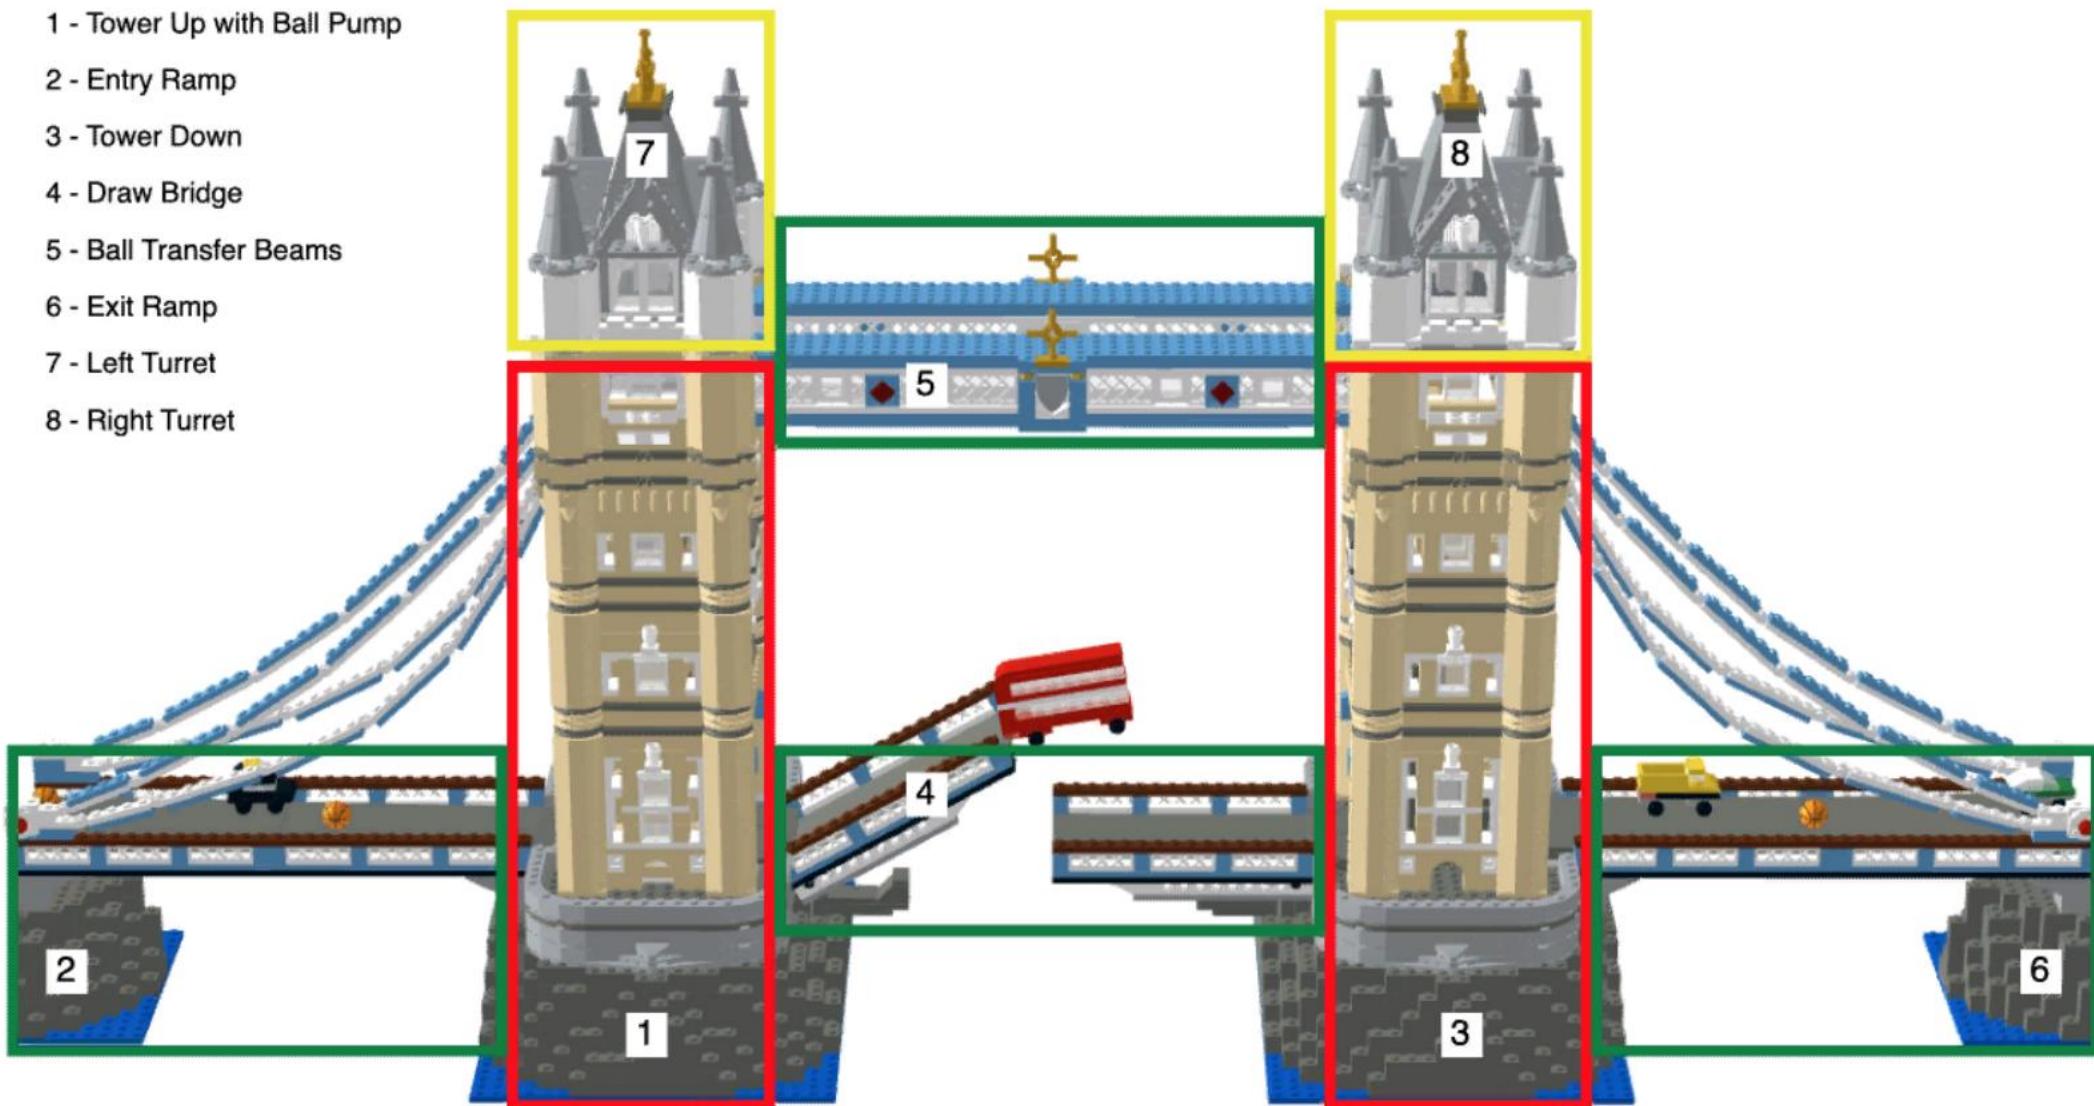

The official 10214 Tower Bridge set contains 4295 parts, however not all of those parts are used in the final construction of the GBC.

The complete Tower Bridge GBC contains 5597 parts.

Builders Tip: The only parts of the original set that have not been changed in some manner are the roof turrets, blue/white cables and the second floor of each tower. If you already have this set built, I suspect it would be less frustrating to rebuild completely, than try to modify it.

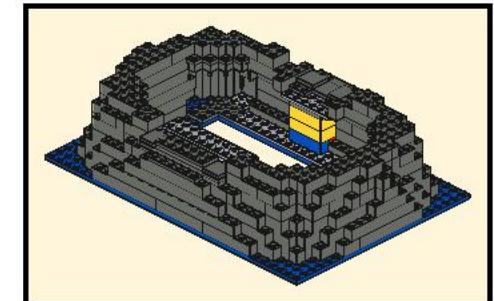

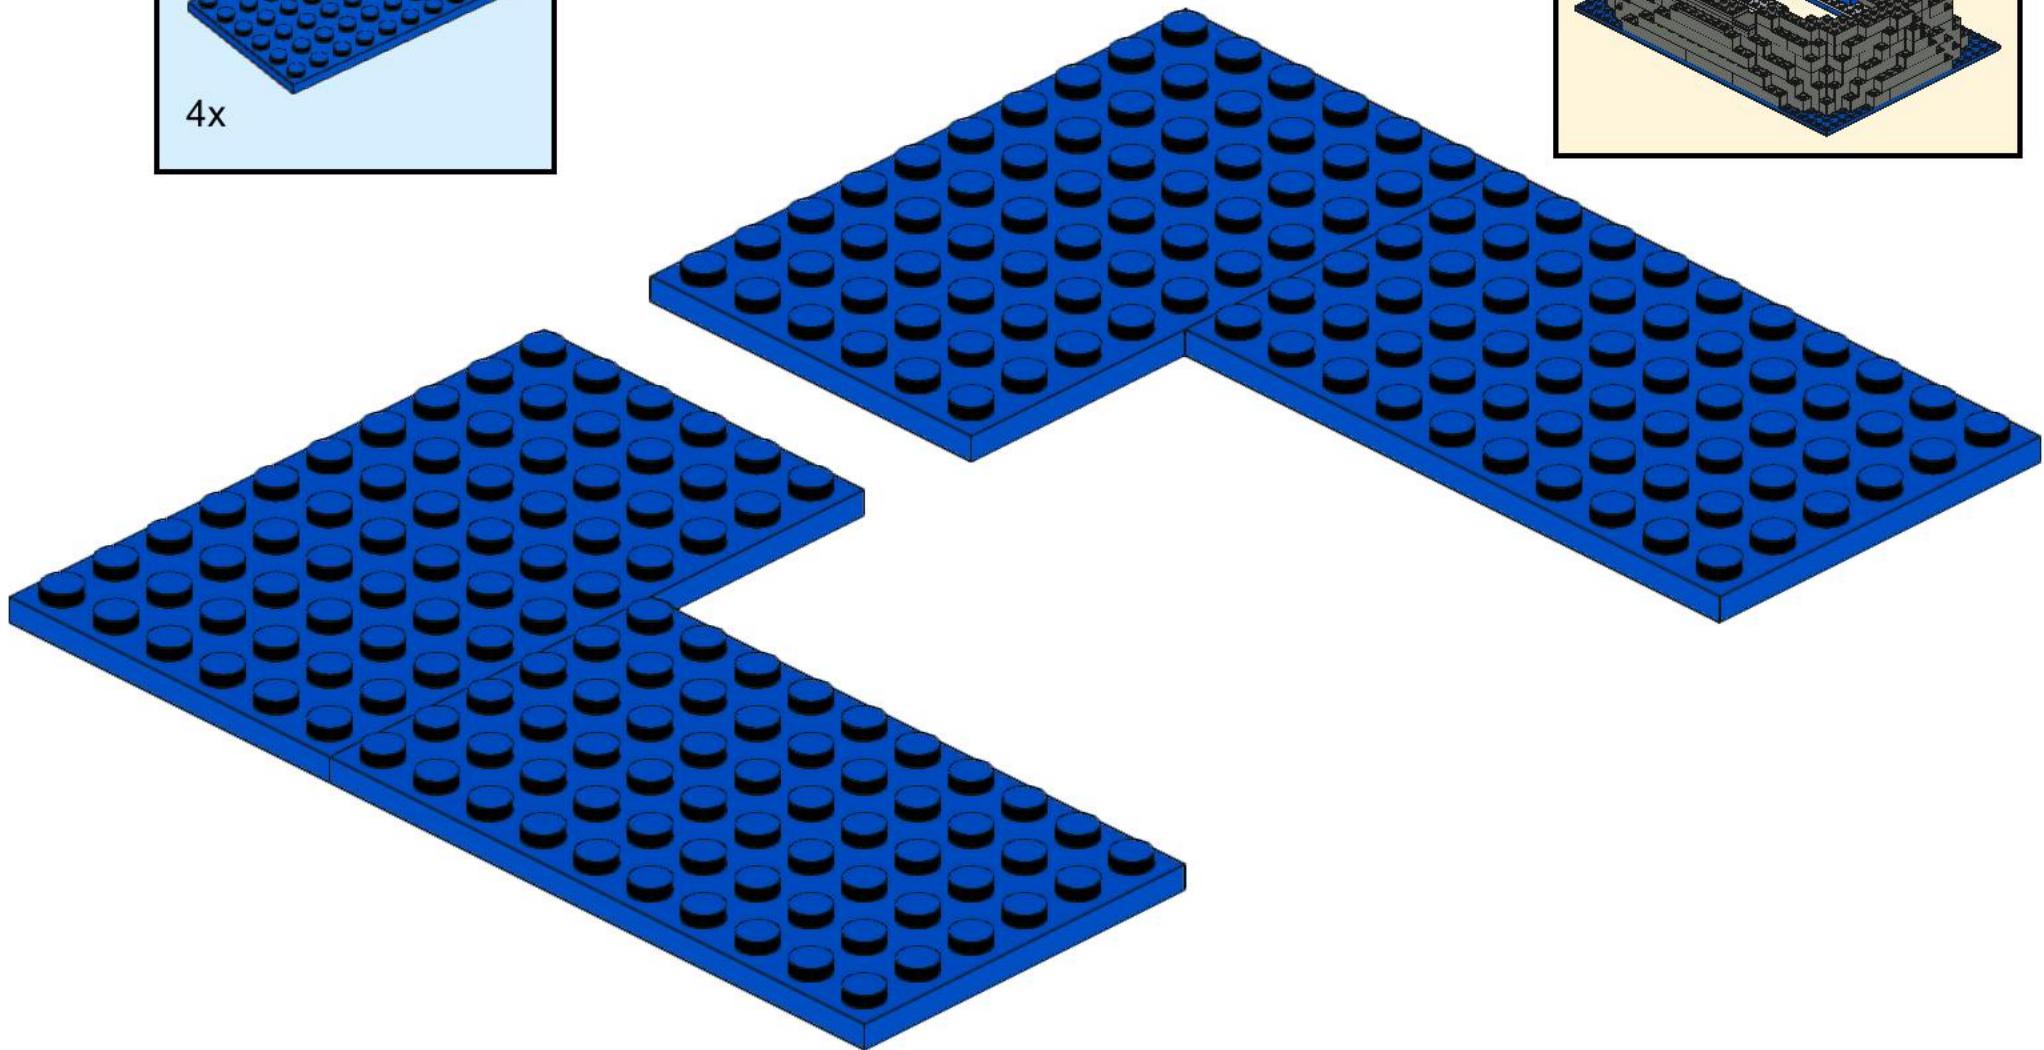

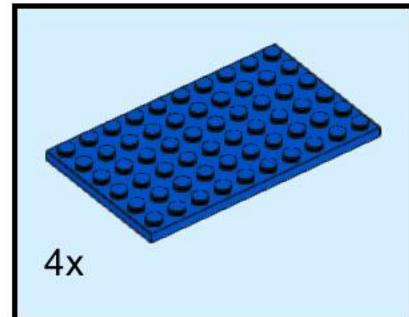

Sub-Component Overview - Build Sequence

- 1 - Tower Up with Ball Pump
- 2 - Entry Ramp
- 3 - Tower Down
- 4 - Draw Bridge
- 5 - Ball Transfer Beams
- 6 - Exit Ramp
- 7 - Left Turret
- 8 - Right Turret
